

## TECHNICAL SUPPORT MATERIAL

Model AF (3D, 3DS) series Batch-Type Dishmachine Venting

### Dishroom Latent and Sensible Loading from using Dishmachine

For the ADS Low-temp design, incoming water temperature of 120F is sprayed within the cabinet for 30 seconds before the cycle shuts down, there is no sustainer heater. Spraying the water will reduce the temperature from 8-10% during that time. When the doors open and vapor is released into the room, a period of 6-8 seconds completes venting out. The impact to the room is equal to that of washing hands with hot water in a kitchen sink, consequently the industry name of "Low-temp" dishwasher.
